                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gtereoisomerism.";
Biochemistry 33:13581-13592(1994).
-!-FUNCTION: Endogenous activator of intestinal guanylate cyclase. It
stimulates this enzyme through the same receptor binding region as
the heat-stable enterotoxins.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Highly expressed in ileum and colon. Found in
                                                                                                                                                                                                                                                                            Kuhn M., Raida M., Adermann K., Schulz-Knappe P., Gerzer R., Heim J.-M., Porssmann W.-G.;
"The circulating bloactive form of human guanylin is a high molecular weight peptide (10.3 kpa).";
FEBS Lett. 318:205-209(1993).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7 WAAVLLLLVLQSAQGVYIKYHGFQVQLESVKKLNELEEKQMSDPQQQKSG------

## ALIGNMENTS

This sequence represents a precursor of the guanyl cyclase C activating peptide, GCAP-II, which affects insulin secretion by the beta cells in the pancreas. This peptide is useful for treating pancreatic endocrine disorders, especially diabetes mellitus type II, renal and intestinal disorders, disorders of the gastrointestinal, respiratory and urogenital apparatus, disorders of the cardiovascular and nervous systems, disorders of the cardiovascular and nervous systems, disorders of the integuments and sense organs and diseases associated with GCAP-II (89-112) deficiency. This peptide can be used for treatment of electrolyte effects on bone reconstruction (osteoporosis) or the dental apparatus. Antibodies to GCAP-II (89-112) can be used to treat diseases associated with overproduction of GCAP-II (89-112). Human GCAP-II (89-112) and GCAP-II (89-112) and GCAP-II (89-113) and treatment of the above disorders e.g. gene therapy for diabetes fragments - have insulinotropic Kruhoeffer M, Meyer M, Pardigol A, Heine G; Guanyl cyclase C activating peptide II; GCAP-II; insulinotropic; diabetes; endocrine disorder; diagnosis; treatment; human. New guanyl cyclase C activating peptide fragactivity, useful for treating diabetes, etc. AAW18498 standard; protein; 112 AA. Human GCAP-II precursor protein. intramuscular

```
against GCAP-II are useful as immunoassay reagents. GCAP-II is administered at, e.g. 100-1200 microg/day by intravenous or intramuscula origidation or 300-1200 microg/day subcutaneously. It may also be given orally, intranasally or by inhalation, in typical unit doses of 0.3-30 mg. GCAP-II was chemically synthesised, or isolated by chromatography from transformed eukaryotic or prokaryotic cells, or human blood. When T84 cells were incubated with synthetic GCAP-II, generation of cGMP was increased in a dose dependent manner. GCAP-II influences cGMP production via known receptor for heat stable enterotoxin. Other stomach, intestinal, pancreatic and liver cells also responded to GCAP-II, e.g. via changes in intracellular Ca2+ ion concentration
                                                                                                                                                                                                                                      Sequence 112 AA;

GCAP-II can be used to treat a variety of kidney, intestinal, respiratory, urogenital, circulatory and nervous system disorders, diseases of the endocrine and sensory systems (e.g. osteoporosis, and dental disease), disorders of the pancreas (e.g. diabetes, and hypophysis) or the endocrine gastrointestinal tract and for the long term treatment of diarrhoea, without inducing an immune response. The GCAP-II cDNA can be used to treat the same conditions, clone the GCAP-II-encoding gene for use in gene therapy, as a hybridisation probe and for the production of recombinant GCAP-II or transgenic animal creation. Antibodies raised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; guanylate cyclase; activating peptide; GCAP-II; cGMP; transepithelial transport; treatment; kidney; intestinal; respiratory; urogenital; circulatory; nervous system, disorder; disease; endocrine; sensory; system; osteopoxosis; dental; pentess; diabetes; hypophysis; gastrointestinal tract; diarrhoea; gene therapy; probe; recombinant production; transgenic animal; antibody; immunoassay reagent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel medicament in a formulation that is delivered to the apical membrane of mucosal epithelial cells through the respiratory tract. The medicament contains at least one peptide that activates guanylate cyclase C (GCC). GCC is a G protein-coupled receptor that catalyses conversion of guanosine triphophate to cyclic guanosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition useful for treating respiratory disease, comprises a peptide that activates guanylate cyclase C, and is delivered to the apical membrane through the respiratory tract.

monophosphate (cGMP) and is present on the apical (air) side of respiratory epithelial cells but not on the basolateral (blood) side. CGMP activates membrane-associated type II protein kinase which in turn activates the regulatory domain of the cytic fibrosis transmembrane conductance regulator, resulting in secretion of chloride ions and water from the cells, causing fluidisation of the mucus. The products of the invention are used to make an inhalation device containing the medicament for diagnosing diseases that are accompanied by breathing disorders or disorders of mucus secretion in the respiratory tract, by detecting at least one GCC activator. The products of the invention have antiasthmatic and antiinflammatory activity. The method is useful for diagnosing and treating diseases accompanied by breathing disorders or disorders of the companied by breathing disorders or disorders of the companied by breathing disorders or disorders of improves fluidity and evacuation of bronchial mucus and acts locally chronic bronchitis and cystic fibrosis. The product of the invention improves fluidity and evacuation of bronchial mucus and acts locally cance the medicament does not enter the bloodstream), so systemic side effects are minimised. Only very small doses of the medicament are required. This sequence represents a precursor of the human guanylate the contraction of the contraction of the human guanylate the contraction of the medicament are contraction. the invention 888888888888888888888888888

Increasing ST receptor molecules on the surface of a colorectal, gastric or esophageal cancer cell to treat these cancers comprises administering ST receptor ligand molecules that bind to ST receptors on the surface of the cancer cell. 

activating peptide, GCAP-II, obtained by digestion with endoprocease Arg-C. GCAP-II is involved in insulin secretion by pancreatic beta cells.
This peptide fragment could be used to which affects insulin secretion by the beta cells treat pancreatic endocrine disorders, especially diabetes mellitus type II, renal and intestinal disorders, disorders of the castionstestinal, respiratory and urogenited apparatus, disorders of the cardiovascular and nervous systems, disorders of the sense organs and diseases associated with GCAP II (89-112) deficiency.

New guanyl cyclase C activating peptide fragments - have insulinotropic activity, useful for treating diabetes, etc.

Peptides AAW18467-W18470 represent fragments of the guanyl cyclase C

ö The specification describes a method for increasing the number of heat stable toxin (ST) receptor molecules on the surface of a metastasised colorectal cancer cell. The method comprises administering, by continuous infusion, at least 0.1 nM of an ST receptor ligand per 10 kg bodyweight per hour for at least 6 hours, where ST receptor ligand molecules bind to ST receptors on the surface of the cancer cell in the individual and the number of ST receptor molecules on the surface of the cancer cell is increased. Therapeutic compositions comprising components which target ST receptors can then be used to inhibit proliferation of the colorectal, gastric and oesophageal cells. This method may be used for treating individuals that hat have diseases that affect colorectal, gastric and oesophageal cells, including colorectal, gastric or oesophageal cancers. The present sequence represents a ST receptor ligand used in the method 8 1 MGCRAASGLLPGVAVVLLLLQSTQSVYIQYQGFRVQLESMKKLSDLRAQWAPSPRLQAQ 60 1 MGCRAASGLLPGVAVVLLLLLQSTQSVYIQYQGFRVQLESMKKLSDLEAQWAPSPRLQAQ Gaps ö Heine 61 SLLPAVCHHPALPQDLQPVCASQEASSIFKTLRTIANDDCELCVNVACTGCL 112 SLLPAVCHHPALPQDLQPVCASQEASSIFKTLRTIANDDCELCVNVACTGCL 112 Guanyl cyclase C activating peptide II; GCAP-II; insulinotropic; diabetes; endocrine disorder; diagnosis; treatment; human. ö Human GCAP-II (89-112) endoprotease Arg-C digested fragment 1. AAW2322 RESULT

Guanylate cyclase activating peptide II - increases cGMP formation, an controls transport of water and electrolytes across epithelial cells. Claim 3; Page 4-5; 15pp; German. 

peptides AAW18478-W18483 represent fragments of the guanyl cyclase C activating peptide, GCAP-II, obtained by digestion with trypsin. GCAP-II is involved in insulin secretion by pancreatic beta cells. This peptide fragment could be used to which affects insulin secretion by the beta cells treat pancreatic endocrine disorders, especially diabetes mellitus type II, renal and intestinal disorders, disorders of the respiratory, gastrointestinal and urogenital apparatus, disorders of the captiratory, readiovascular and nervous systems, disorders of the integuments and sense organs and diseases associated with GGAP II (89-112) deficiency. This peptide can be used for treatment of electrolyte effects on bone reconstruction (osteoporosis) or the dental apparatus. Antibodies to GCAP-II (89-112) can be used to treat diseases associated with overproduction of GCAP-II (89-112). Human GCAP-II (89-112) and GCAP II (89-113) conduction of GCAP-II (89-112) and drawn are useful for diagnosis and treatment of the above disorders e.g. gene

therapy for diabetes

Sequence 108 AA;

New guanyl cyclase C activating peptide fragments - have insulinotropic activity, useful for treating diabetes, etc.

```
The present sequence is a carboxy-terminal fragment of the human correctivating peptide II (GCAP-II) precursor, prepared by consider cyclase activating peptide II (GCAP-II) precursor, prepared by endoptrotecloytic cleavage with endoptroteinase Arg-C. GCAP-II increases cGMP formation, and is involved in the control of transspithalial water and electrolyte transport. GCAP-II can be used to treat a variety of kidney, intestinal, respiratory, urogenital, circulatory and mervous system disorders, diseases of the endocrine and sensory systems (e.g. osteoporosis, and dental disease), disorders of the pancreas (e.g. osteoporosis, and dental disease), disorders of the pancreas (e.g. catabetes, and hypophysis) or the endocrine gastrointestinal tract and for the long term treatment of diarrhoes, without inducing an immune treatment of category as ingene for the production of recombinant GCAP-II or thranged against GCAP-II or transgenic animal creation. Antibodies raised against GCAP-II are useful as immuneassay reagents GCAP-II, or a fragment, are administered at, c. e.g. 100-1200 microg/day by intravenous or intrammecular injection or 300 c.1200 microg/day subcutaneously. They may also be given orally, c. intransally synthesised, or isolated by chromatography from transformed eukaryotic or prokaryotic cells, or human blood. When T84 cells were incubated with synthetic GCAP-II, generation of cGMP was
                                                                                                               95DE-01028544.

Peptides AAW18484-W18487 represent fragments of the guanyl cyclase C activating peptide, GCAP-II, obtained by digestion with chymotrypsin. GCAP-II is involved in insulin secretion by pancreatic beta cells. This peptide fragment could be used to which affects insulin secretion by the mellitus type II, renal and intestinal disorders, especially diabetes mellitus type II, renal and intestinal disorders, disorders of the respiratory, gastrointestinal and urogenical apparatus, disorders of the cardiovascular and nervous systems, disorders of the integuments and sense organs and diseases associated with GCAP II (89-112) deficiency. This peptide can be used for treatment of electrolyte effects on bone reconstruction (osteoporosis) or the dental apparatus. Antibodies to GCAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -II (89-112) can be used to treat diseases associated with overproduction of GCAP-II (89-112). Human GCAP-II (89-112) and GCAP-I (99-15) cDNA are useful for diagnosis and treatment of the above disorders e.g. gene

The present sequence is a carboxy-terminal tragment of the numan graduence is a carboxy-terminal tragment of the numan curvating peptide II (GAP-II) precursor, prepared by endoproteolytic cleavage with chymotrypain. GCAP-II increases CGMP condoproteolytic cleavage with chymotrypain. GCAP-II increases CGMP condoproteolytic cleavage with chymotrypain. GCAP-II increases CGMP cleatrolyte transport. GCAP-II can be used to treat a variety of kidney, intestinal, respiratory, urogenital, circulatory and nervous system (e.g. disorders, diseases of the endocrine and sensory systems (e.g. clasoretes, and hypophysis) or the endocrine gastrointestinal tract and for the long term treatment of diarrhoea, without inducing an immune cresponse. The GCAP-II cDNA can be used to treat the same conditions, clone the GCAP-II cDNA can be used to treat the same conditions, clone the GCAP-II cDNA can be used to treat the same conditions, clone the GCAP-II concoling gene for use in gene therapy, as a conditions, clone the GCAP-II concoling sensor araised against GCAP-II are useful as immunoassay reagents of the production of recombinant GCAP-II or cranspenit animal creation. Antibodies raised against CAP-II are useful as immunoassay reagents GCAP-II, new alway also be given orally.

CI 100-1200 microg/day by intravenous or intramuscular injection or 300 contranspenit control or prockaryotic cells, or human blood. When T84 cells were incubated with synthetic GCAP-II influences CGMP was concessed in a dose dependent manner. GCAP-II influences CGMP production via a known receptor for heat stable enterotoxin. Other stomach,

Antibodies to GCAP-II (89-112) can be used to treat diseases associated with overproduction of GCAP-II (89-112), Human GCAP-II (89-112) and GCAP I (99-15) cDNA are useful for diagnosis and treatment of the above disorders e.g. gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptides AAW18484-W18487 represent fragments of the guanyl cyclase C activating peptide, GCAP-II, obtained by digestion with chymotrypsin. GCAP-II is involved in insulin secretion by pancreatic beta cells. This peptide fragment could be used to which affects insulin secretion by the beta cells treat pancreatic endocrine disorders, especially diabetes mellitus type II, renal and intestinal disorders, disorders of the respiratory, gastrointestinal and urogenital apparatus, disorders of the cardiovascular and nervous systems, disorders of the integmments and sense organs and diseases associated with GCAP II (89-112) deficiency. This peptide can be used for treatment of electrolyte effects on bone.
                                                                                                                                                            88
                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New guanyl cyclase C activating peptide fragments - have insulinotropic activity, useful for treating diabetes, etc.
intestinal, pancreatic and liver cells also responded to GCAP-II, e.g. via changes in intracellular Ca2+ ion concentration

```
The present sequence is a carboxy-terminal fragment of the human curvature cyclase activating peptide II (GCAP-II) precursor, prepared by enapylate cyclase activating peptide II (GCAP-II) precursor, prepared by endoproteolytic cleavage with chymotrypsin. GCAP-II increases GGMP cormation, and is involved in the control of transepithelial water and formation, and is involved in the control of transepithelial water and clectrolyte transport. GCAP-II can be used to treat a variety of kidney, intestinal, respiratory, urogenital, circulatory and nervous system of sorters, and dental disease), disorders of the pancreas (e.g. cateoporosis, and hypophysis) or the endocrine gastrointestinal tract and for the long term treatment of disorders of the pancreas (e.g. diabetes, and hypophysis) or the endocrine gastrointestinal tract and for the long term treatment of diarrhoca, without inducing an immune conditions, clone the GCAP-II-encoding gene for use in gene therapy, as a fumunoassay reagents. GCAP-II, or a fragment, are administered at. ctranspent animal creation. Antibodies raised against GCAP-II are useful as immunoassay reagents. GCAP-II, or a fragment, are administered at. ce.g. 100-1200 microg/day by intravenous or intramsenal injection or 300 cc.g. intransally or by inhalation, in typical unit doses of 0.3-30 mg. GCAP-II was chemically synthesised, or isolated by chromatography from cransformed enkaryotic or prokaryotic cells, or human blood. When T84 cells were incubated with synthetic GCAP-II, generation of GGMP was corresponded in intracellular Ca2+ ion concentration
                                                                                                                                                                                                                                                                                                                                                                          Human; guanylate cyclase; activating peptide; GCAP-II; cGMP; transepithelial transport; treatment; kidney; intestinal; respiratory; urogenital; circulatory; nervous system; disorder; disease; endocrine; sensory; system; osteoporosis; dental; parcras; diabetes; hypophysis; gastrointestinal tract; diarrhoas; gene therapy; probe; recombinant production; transgenic animal; antibody; immunoassay reagent.

Peptides AAW18484-W18487 represent fragments of the guanyl cyclase C activating peptide, GCAP-II, obtained by digestion with chymotrypsin. GCAP-II is involved in insulin secretion by pancreatic beta cells. This peptide fragment could be used to which affects insulin secretion by the beta cells treat pancreatic endocrine disorders, especially diabetes mellitus type II, renal and intestinal disorders, disorders of the respiratory, gastrointestinal and urogenital apparatus, disorders of the cardiovascular and nervous systems, disorders of the integuments and sense organs and diseases associated with GCAP II (89-II2) deficiency. This peptide can be used for treatment of electrolyte effects on bone reconstruction (osteoporosis) or the dental apparatus. Antibodies to GCAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (89-112) can be used to treat diseases associated with overproduction GCAP-II (89-112). Human GCAP-II (89-112) and GCAP-II (89-112) cDNA are ful for diagnosis and treatment of the above disorders e.g. gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                fragments - have insulinotropic

The present sequence is a carboxy-terminal fragment of the human candinate cyclase activating peptide II (GCAP-II) precursor, prepared by endoproteolytic cleavage with chymotrypain. GCAP-II) precursor, prepared by comparing the control of transpital water and electrolyte transport. GCAP-II can be used to treat a variety of kidney, intestinal, reablization, and is involved in the control of transcpitalial water and electrolyte transport. GCAP-II can be used to treat a variety of kidney, cliseases of the endocrine and sensory systems (e.g. disperse, and hypophysis) or the endocrine gastrointestinal tract and for the long term treatment of distribution inducing an immune the GCAP-II conciding gene for use in gene therapy, as a concition probe and for the production of recombinant GCAP-II or transgenic animal creation. Antibodies raised against GCAP-II are useful cas immunoassay reagents. GCAP-II, or a fragment, are administered at, e.g. 100-1200 microg/day by intravenous or intramuscular injection or 300 contransmally or by inhalation, in typical unit doses of 0.3-30 mg. CCMP-II was chemically synthesised, or isolated by chromatography from transformed eukaryotic or prokaryotic cells, or human blood. When T84 cells were incubated with synthetic GCAP-II influences CGMP was increased in a dose dependent manner. GCAP-II influences CGMP production via a known receptor for heat stable enterotoxin. Other stomach, in the contract of GCAP-II, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptides AAW18467-W18470 represent fragments of the guanyl cyclase C activating peptide, GCAP-II, obtained by digetion with endoprotease Arg-C. GCAP-II is involved in insulin secretion by pancreatic beta cells. This peptide fragment could be used to which affects insulin secretion by the beta cells treat pancreatic endocrine disorders, especially diabetes mellitus type II, renal and intestinal disorders, disorders of the gastrointestinal, respiratory and urogenital apparatus, disorders of the cardiovascular and nervous systems, disorders of the integuments and sense organs and diseases associated with GCAP II (89-II2) deficiency. This peptide can be used for treatment of electrolyte effects on bone reconstruction (osteoporosis) or the dental apparatus, Antibodies to GCAP-II (89-II2) and be used to treat diseases associated with overproduction of GCAP-II (89-II2). Human GCAP-II (89-II2) and GCAP-II (89-II2) cand treatment of the above disorders e.g. gene

peptides AAW18478-W18483 represent fragments of the guanyl cyclase C activating peptide, GCAP-II, obtained by digestion with trypsin. GCAP-II is involved in insulin secretion by pancreatic beta cells. This peptide fragment could be used to which affects insulin secretion by the beta cells treat pancreatic endocrine disorders, especially diabetes mellitus type II, remal and intestinal disorders, disorders of the respiratory, gastrointestinal and urogenital apparatus, disorders of the respiratory. This peptide can he used for treatment of electrolyte effects on bone reconstruction (osteoporosis) or the dental apparatus. Antibodies to GCAP il (89-112) can be used to treat diseases associated with overproduction of GCAP-II (89-112). Human GCAP-II (89-112) and GCAP il (99-15) cDNA are useful for diagnosis and treatment of the above disorders e.g. gene
                                                                                                                                                                                                                                                                                                                                                                                                                               New guanyl cyclase C activating peptide fragments - have insulinotropic activity, useful for treating diabetes, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           36 VQLESMKKLSDLEAQWAPSPRLQAQSLLPAVCHHPALPQDLQPVCASQEASSIFKTLRTI

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 55, Application US/08583447A

Patent No. 5879566

GENERAL INFORMATION:
APPLICANT: Waldman, Scott A.
TITLE OF INVENTION: Methods of Using the Same
TITLE OF INVENTION: Methods of Using the Same
NUMBER OF SEQUENCES: 56
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 5879656ris
STREET: One Liberty Place, 46th Floor
CITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 15.5%; Score 90; DB 1; Length 15; 100.0%; Pred. No. 9.5e-05;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C,Comment: This protein, a member of a family of heat-stable peptides, is a potent extra
axis. This peptide signalling system plays a role in osmoregulation in euryhaline telec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 guanylin precursor, long form - Buropean eel
Cispecies: Anguilla anguilla (Buropean eel)
Cispecies: Anguilla anguilla (Buropean eel)
Cispacesion: JC7820
Cispacesion: JC7820

| Drahim A., Liesack W., Stackebrandt E.;

Submitted (NOV-1992) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Toxin which activates the particulate form of guanylate cyclase and increases cyclic GMP levels within the host intestinal epithelial cells (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the heat-stable enterotoxin family.
                                                                                                                           DOI=10.1128/JB.185.17.5320-5323.2003;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               degrees Celsius. Under conditions of high osmolarity and alkaline pH (as it is the case in the host's intestine), it is expressed at 37 degrees Celsius.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               STRAIN=84-50 / Serotype 0:5;

New conjugated compounds are provided which consist of (1) an ST receptor binding molety and (2) an active molety which is a radio- stable agent. ST' refers to a heat stable toxin produced by E.coli and other corganisms. Bspecially the radiostable agent is a therapeutic agent (e.g. methotrexate, doxorubicin, mitomycin), imaging agent (e.g. radioactive isotope) or nucleic acid; and the compound is used for the detection, imaging or treatment of colorectal tumours, particularly metastasised tummours. The present sequence is a specific example of an ST receptor binding peptide which can be used in the conjugate Conjugated cpds. which specifically bind to colorectal cancer cells comprise heat-stable toxin receptor binding moiety and active moiety which may be a therapeutic agent or a radioactive agent. The specification describes a method for increasing the number of heat stable toxin (ST) receptor molecules on the surface of a metastasised colorectal cancer cell. The method comprises administering, by continuous infusion, at least 0.1 nM of an ST receptor ligand per 10 kg bodyweight per hour for at least 6 hours, where ST receptor ligand molecules bind to ST receptors on the surface of the cancer cell in the individual and the number of ST receptor molecules on the surface of the cancer cell is increased. Therapeutic compositions comprising components which target ST receptors can then be used to inhibit proliferation of the colorectal, gastric and oesophageal cells. This method may be used for treating individuals that have diseases that affect colorectal, gastric and oesophageal cells, including colorectal, gastric can desphageal cells, including colorectal, gastric can be supposed and cells including colorectal, gastric can be supposed cells including colorectal, gastric can be supposed cells. Including colorectal, gastric can be supposed cells including colorectal, gastric can be supposed cells. Including colorectal can be supposed cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Increasing ST receptor molecules on the surface of a colorectal, gastric or esophageal cancer cell to treat these cancers comprises administering ST receptor ligand molecules that bind to ST receptors on the surface of the cancer cell.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is useful for the treatment of colorectal cancer. The use of the conjugated compound is advantageous compared to antibodies since it binds specifically to colorectal cells and has no toxic effect on normal cells. The present sequence represents the amino acid sequence of a ST receptor peptide ST 1b
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (heat-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Conjugated compound; ST receptor; heat-stable; toxin; colorectal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           stable toxin) receptor moiety selected from one of the sequences shown i AAV40508-Y40559 and an active moiety (antisense molecule). The compound
                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Conjugated compound comprising a receptor moiety and active moiety, useful for the treatment/prevention of colorectal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to a conjugated compound that comprises a ST
                                                                              ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                                                                                                          셤
                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                New conjugated compounds are provided which consist of (1) an ST receptor binding molety and (2) an active molety which is a radio- stable agent. 'ST' refers to a heat stable toxin produced by B.coli and other organisms. Especially the radiostable agent is a therapeutic agent (e.g. methotrexate, doxorubicin, mitomycin), imaging agent (e.g. radioactive isotope) or nucleic acid; and the compound is used for the detection, imaging or treatment of colorectal tumours, particularly metastasised tumours. The present sequence is a specific example of an ST receptor binding peptide which can be used in the conjugate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a conjugated compound that comprises a ST (heatstable toxin) receptor moiety selected from one of the sequences shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ST receptor; heat-stable; toxin; colorectal cancer.
                                                                                                       Conjugated cpds, which specifically bind to colorectal cancer cells comprise heat-stable toxin receptor binding moiety and active moiety which may be a therapeutic agent or a radioactive agent.
                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and active moiety,

The method comprises administering, by continuous infusion, at least 0.1 m/ of an ST receptor ligand per 10 kg bodyweight per hour for at least 6 hours, where ST receptor ligand molecules bind to ST receptors on the surface of the cancer cell in the individual and the number of ST receptor molecules on the surface of the cancer cell is increased. Therapeutic compositions comprising components which target ST receptors can then be used to inhibit proliferation of the colorectal, gastric and oesophageal cells. This method may be used for treating individuals that have diseases that affect colorectal, gastric, and
is useful for the treatment of colorectal cancer. The use of the conjugated compound is advantageous compared to antibodies since it binds specifically to colorectal cells and has no toxic effect on normal cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Increasing ST receptor molecules on the surface of a colorectal, gastric or esophageal cancer cell to treat these cancers comprises administering ST receptor ligand molecules that bind to ST receptors on the surface of the cancer cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             oesophageal cells, including colorectal, gastric or oesophageal cancers. The present sequence represents a fragment of a ST designated ST Ib (see ADR45825), which is used as the ST receptor ligand in the method of the

```
The specification describes a method for selecting a candidate drug compound having affinity for biological receptors. The method uses a combination of rational and combinatorial drug design techniques. At least 1 residue in the original cell receptor binding peptide is modified to a non-natural amino acid, preferably a beta turn mimetic, a gamma-turn mimetic, a beta sheet mimetic or a disulphide bridge mimetic. The method its used for identification of a candidate receptor antagonist or agonist. The present peptide is a cell receptor binding peptide, and can thus be used as a starting point for identification of candidate drug compounds, using the method of the invention
                        Selection; candidate drug; cell receptor binding; affinity;
biological receptor; rational drug design; combinatorial drug design;
receptor antagonist; receptor agonist; ST enterotoxin; beta turn mimetic;
gamma-turn mimetic; beta sheet mimetic; disulphide bridge mimetic.
                                                                                                                                                                                                                                                                                                                                                       Method of drug selection - and use of an acetamidomethyl-protected polymer as a substrate in the solid state synthesis of an oligopeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Heat stable ST enterotoxin; immunoreagent; radiological therapy; diagnosis; ST receptor binding moiety; macrocyclic complexing agent; tumour; infectious diarrhoeal disease; diarrhoea.

(MBC) comprises a mucosal binding polypeptide linked to at least 1 antigen from a non-viral pathogen, which causes a sexually transmitted disease (STD), e.g. the present enterotoxigenic B. coli STa protein antigen. The MBC, which is administered vaginally, rectally or orally, generates a mucosal immune response against the viral STD by allowing for the prodn. of high levels of secretory immunity, which forms the 1st line of defence against the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mucosal binding compositions for generating mucosal immune response - comprises mucosal binding peptide, pref. derived from cholera toxin, and an antigen, e.g. derived from E. coli, HIV, etc.

The invention provides a targeting immunoreagent that comprises a metal ion and an immunoreactive group covalently bonded to a terpyridine complexing agent of a specified formula. The immunoreagent is useful in diagnostic imaging and therapeutic compositions. The immunoreagent is used for radiological treatment of tumours. When the immunoreagent contains yttrium, the radiation toxicity is lower compared with other yttrium chelators. The immunoreagent is not rapidly metabolized and does not disperse and efficiently forms covalent bonds with proteins and other biological molecules. The immunoreagent has good emission characteristics and are easily spectrophotometrically analysed. Protein conjugates can be stored for metal complexing without activation steps that degrade protein. The terpyridine complexing agent rapidly complex with metals and the obtained chelates have good tabbility. Sequences AAY06971-976 represent examples of heat stable ST enterotoxin peptides that can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    used as the immunoreactive group in the immunoreagent of the invention
                                                               Targeting immunoreagent for diagnostic imaging and therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score 15;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                       radiological therapy of tumours. In addition, a variety of bacteria, including Escherichia coli, Vibrio cholerae, Citrobacter freundii, and versinia enterocollitos, bind to ST receptors and cause infectious diarrhoeal diseases, particularly in pediatrics and in developing countries. These types of diarrhoea can also be treated using TI's. TI's may specifically used to treat cancers and also be used as an antidiarrhoeal agent. TI's are free from the various disadvantages of prior art reagents, including rapid destruction and/or excretion, instability in storage, and protein degradation. There is no perturbation of protein reactive groups at the pyridyl chelating site. AAY29607 to AAX29612 represent examples of heat stable ST enterotoxins given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                         The present invention describes targeting immunoreagents (T1's) comprising a metal ion and a residue of a macrocyclic complexing agent (MCA). T1's are of use in diagnostic imaging and therapy of specific disease sites in a patient, using either radioactive, magnetic resonance, or fluorescent means of detection or use of the metal ion; alternatively, a substituent of these types may be introduced, e.g. radioactive iodine, to perform the same function. Most notable is the imaging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Targeting immunoreagent, metal ion; immunoreactive; terpyridine; tumour; complexing agent; diagnostic imaging; radiological treatment; yttrium; therapeutic; radiation toxicity; heat stable; ST enterotoxin.
                                                                                                                                                                                       Macrocyclic complexing agents containing linked 2,6-pyridinylene nuclei as components of targeting immunoreagents binding to ST receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ô
compound having affinity for biological receptors. The method uses a combination of rational and combinatorial drug design techniques. At least 1 residue in the original cell receptor binding peptide is modified to a non-natural amino acid, preferably a beta turn mimetic, a gamma-turn mimetic, a beta sheet mimetic or a disulphide bridge mimetic. The method is used for identification of a candidate receptor antagonist or agonist. The present peptide is a cell receptor binding peptide, and can thus be used as a starting point for identification of candidate drug compounds, using the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New compound for detecting and treating metastatic colorectal cancer comprises a conjugate of an STa peptide and an immunogenic protein which binds to the guanyl cyclase-c receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a conjugate which comprises an E. coli thermostable enterotoxin (STa) peptide and an active molecule where the STa peptide has a conformation such that it is capable of binding to the guanyl cyclase-C (GC-C) receptor. This can be used in the specific diagnosis and treatment of metastatic colorectal cancer. The present sequence is a fragment of the human thermostable enterotoxin (STh)
                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cnermostable enterotoxin; STh; metastatic colorectal cancer;

The peptides of the invention may be used to treat: cancer; polyps; inflammation; asthma; nephritis; hepatitis; pancreatitis; bronchitis; cystic fibrosis; inflammatory bowel disease; ulcerative colitis; Crohn's disease; and Kaposi's sarcoma. The present amino acid sequence represents an Escherichia coli small heat stable enterotoxin tricyclo peptide which was used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel guanylate cyclase receptor agonist peptide useful for preventing treating primary or metastatic cancer and polyps in a patient, and for inducing apoptosis in the cells of a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

This invention describes a novel medicament in a formulation that is delivered to the apical membrane of mucosal epithelial cells through the cespitactory tract. The medicament contains at least one peptide that activates guanylate cyclase (GCC). GCC is a G protein-coupled receptor that catalyses conversion of guanosine triphophate to cyclic guanosine that catalyses conversion of guanosine triphophate to cyclic guanosine composphate (GGMP) and is present on the apical (air) side of respiratory epithelial cells but not on the basolateral (blood) side. CGMP activates membrane-associated type II protein kinase which in turn activates the regulatory domain of the cystic fibrosis transmembrane conductance regulator, resulting in secretion of chloride ions and water from the cells, causing fulidisation of the mucus. The products of the invention are used to make an inhalation device containing the medicament of disorders of mucus secretion in the respiratory tract, by detecting at least one GCC activator. The products of the invention have antiasthmatic disorders of mucus secretion in the respiratory tract particularly bronchial asthmatic chronic bronchitis and cystic fibrosis. The product of the invention contracts of mucus secretion in the respiratory tract particularly bronchial asthmatic contracts of the invention contracts of mucus secretion in the respiratory tract particularly bronchial sethmatic contracts of the invention contracts of the invention contracts of the invention contracts of the medicament does not enter the bloodstream), so systemic side effects are minimised. Only very small doses of the medicament are required. This sequence represents a heat stable E. coli enterotoxin contractived peptide use in an assay to determine guanylate cyclase C activation described in the disclosure of the invention

The present invention relates to a method for targeting an agent to a breast cancer cell, prostate cancer cell, a pancreatic cancer cell or melanoma cancer cell. The method involves contacting the cancer cell with stable enterotoxin (ST) motif that binds to the cancer cell. The ST motif may comprise a tail region (ADC14118) and an receptor binding region (ADC14119). The method is used for targeting an agent to breast, prostate, pancreatic or melanoma cancer cell; for rendering, treating and preventing an unresectable breast, prostate, pancreatic or melanoma tumour and for identifying tumour binding peptide. The present sequence is heat stable enterotoxin (STH) produced by human strain of Escherichia Breast cancer; prostate cancer; pancreatic cancer; melanoma; heat stable enterotoxin; ST motif; tail region; receptor binding region; Method of treating or preventing breast, prostate, pancreatic cancer or melanoma, comprises targeting peptide agent complex to breast cancer cell, prostate cancer cell, pancreatic cancer cell or melanoma cancer Gaps ; Length 19; Indels Hoffman T; 78.9%; Score 15; DB 7; Let 100.0%; Pred. Patent No. 5962220

GENERAL INFORMATION:

APPLICANT: Waldman, Scott A.

TITLE OF INVENTION: Compositions That Specifically
TITLE OF INVENTION: Bind To Colorectal Cancer Cells
TITLE OF INVENTION: And Methods Of Using The Same
NUMBER OF SEQUENCES: 54

CORRESPONDENCE ADDRESS:

ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & ADDRESSEE: No. 596220ris

STREET: One Liberty Place, 46th Floor

CITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      OPERATING SYSTEM: WILLOWS

Sequence 5, Application US/09138237A

Patent No. 6588159

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: ST Receptor Binding Compounds and Methods

TITLE OF INVENTION: Of Using the Same

NUMBER OF SEQUENCES: 54

CORRESPONDENCE ADDRESS:

ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz and No. 6268159718

STRERT: One Liberty Place - 46th Floor

CITY: Philadelphia

STATE: Pennsylvania

COUNTRY: U.S.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Woodcock Washburn Kurtz Mackiewicz and No. 5518888ris

Pending Nucleic Acid and Pending Amino Acid database searches generate two sets of results each. The Pending databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches. Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions arrapm and trapm and trapm.

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions

ngar. bas mgar.

Because they contain data that is confidential, the results of Pending database searches should not be left in the case.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
